

Sustainable development, renewable energy, heritage conservation, and land use
Sustainability is a concept that may be summarized in the following:

- The intergenerational equity in terms of using natural resources as well as for future generations.
- The right to reach energy resources
- The way one treats environment in such a way that no private property is damaged
- The partial use of renewable energy resources in parallel with the use of fossil fuels

A coffee shop and an ice-cream shop are often found on the same block, in close proximity. This is an example of

- deglomeration
- agglomeration
- an export-processing zone
- purchasing-power parity

The best definition of the term "code of practice" related to building design and construction is

- A group of rules, conditions and technical requirements related to construction and building activities, approved by national building council and ministers cabinet
- The conditions and circumstances defined and outlined by the architect and the owner.
- The activities that are not concerned with the contractor duties onsite.
- The organizational regulations that control building materials manufacturing standards.
